

DRAFT SCENARIO FOR AWARENESS USE ONLY

United States East Coast Tsunami Risk Awareness Assessment

Study Region:	Volusia County, FL
Tsunami Scenario Name:	Puerto Rico Trench Earthquake & Tsunami (M 8-9)
Near or Far Source Tsunami:	Far
Estimated Return Period:	250 – 2000 Years
Tsunami Estimated Arrival Time (hours):	2.25
Maximum Estimated Inundation Depth:	13 feet
People in Inundation Zone:	21,167
Essential Facilities in Inundation Zone:	0 (Police, Fire, EOC's, Hospitals & Schools)
Value of Property in Inundation Zone:	\$4,615,233,000
Estimated Inundated Roadways:	6

Disclaimer: The purpose of this DRAFT Scenario is to provide a very preliminary look at potential tsunami exposure for emergency management awareness and planning purposes. The demographic, property and essential facility data is taken from databases contained in FEMA's Hazus Program, may be incomplete, and based on 2010 census data. Data, maps, inundation height, return periods, arrival times, etc. provided in the document and additional links estimate the scale of potential tsunami inundation but not the exact timing, intensity, location, etc. and should be verified with site-specific analysis and visits. The data, maps, links, etc. are provided "as is," without warranty to their performance, merchantable state, or fitness for any particular purpose. The entire risk associated with the results and performance of these data is assumed by the user. This tool should be used strictly as a planning and hazard awareness tool.
